The effects of Hurricane Beryl have affected our community in many ways, but our water remains safe for consumption. Brazosport Water Authority has been aware of the taste, color, and odor issues that are affecting Member Cities and Customers. This is due to the wind, rainfall, and debris from Hurricane Beryl. None of these issues have impacted the safety of our water. Testing has been performed by Brazoria County Health Department Water Lab, as well as Brazosport Water Authority's treatment plant. Though the Raw Water sources have not returned to normal, BWA operation's staff has worked diligently on treating and returning the water to our usual finished product. On July 19, 2024, the color issues have been resolved at the Brazosport Water Authority's Treatment Plant, and by Monday the 22nd, the taste and odor were back to normal. Staff from several Member Cities confirmed water being received from BWA has returned to normal conditions. The Member Cities are in the process of flushing out their distribution system to remove any remaining color, taste, or odor. BWA wishes to express our thanks and appreciation to the Cities Administrative and Public Works Departments for their assistance throughout this event. We apologize for any inconvenience. As always, the safety of the public is our main concern, and we will continue to update as changes occur.
